Fig 2

Figure 1 consists of 12 histograms arranged in a single row. Each histogram represents the frequency distribution of the number of non-zero elements in the vector x for a specific value of n . The x-axis for all histograms is labeled x and ranges from 0 to 120. The y-axis is labeled f and ranges from 0 to 1.0. The histograms are labeled with n values: 10, 20, 30, 40, 50, 60, 70, 80, 90, 100, 110, and 120. As n increases, the distribution becomes more concentrated around zero, with the peak height increasing and the spread decreasing.
